

# Connection

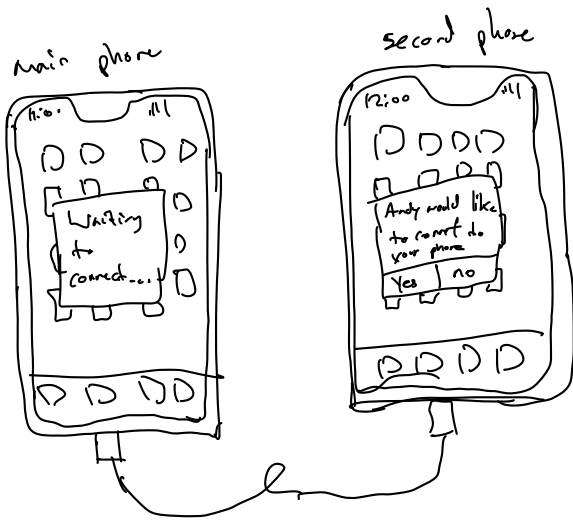

- Connect through USB-C
- Connected phone would have to accept or reject the connection

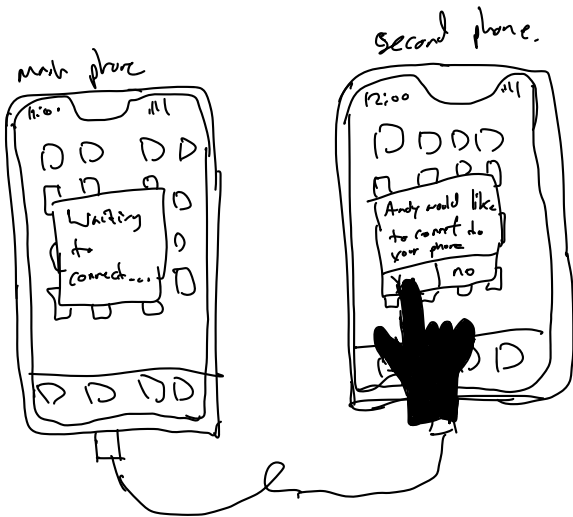

- Connect one end of the USB-C into your main phone

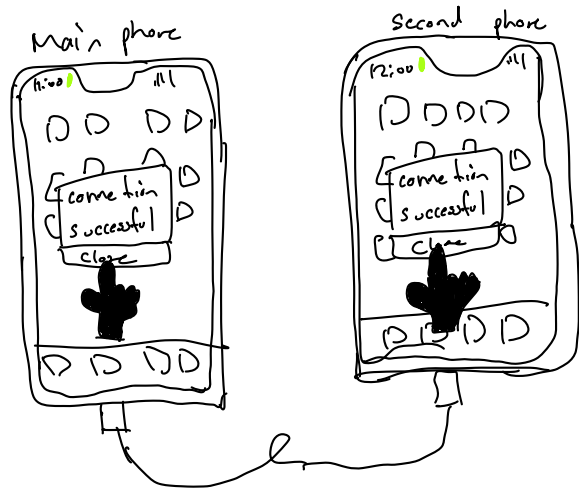

- Connect the other end of the USB-C to the second phone

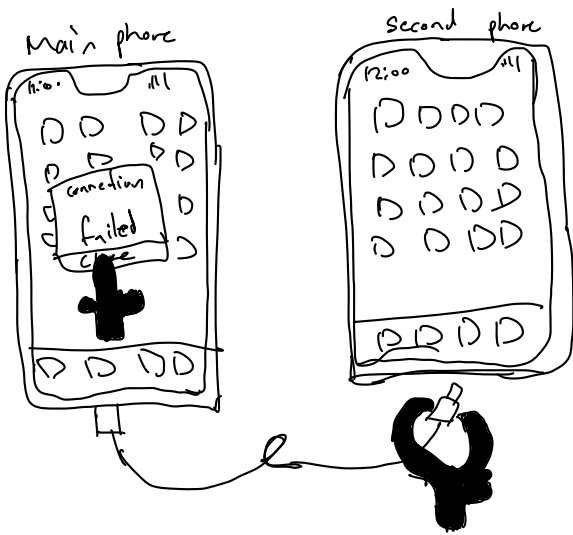

- After connecting the USB-C to the second phone a pop up will appear on the second phone. Say ".... would like to connect to your phone". For the first phone a "waiting to connect--" will pop up

- The User on the second phone can choose whether they want to connect to the main phone or not.

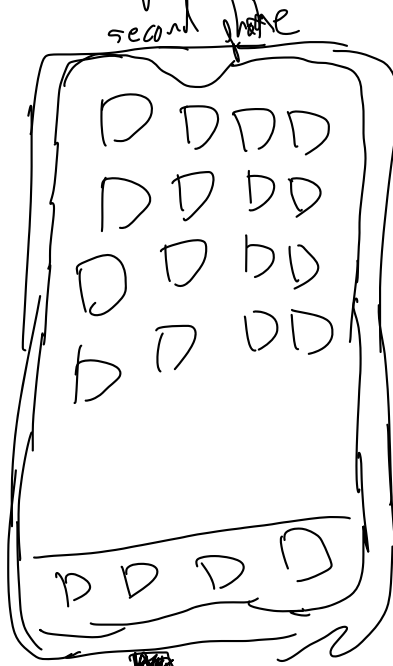

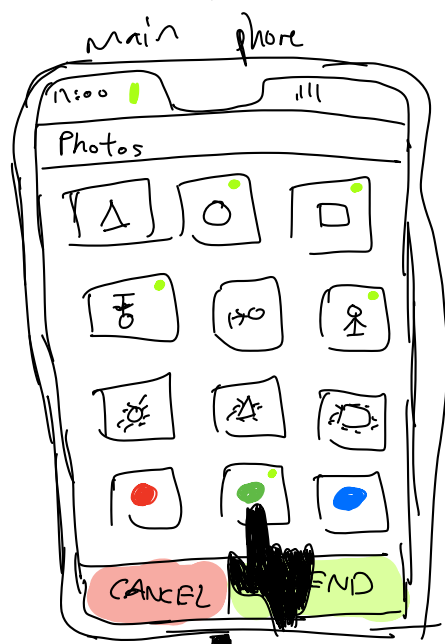

- If user on second phone click on yes. A "connection successful" pop up will show and both user can click on close to close the pop up. There also will be a green oval top left of the phone, Meaning that both phones are connected.

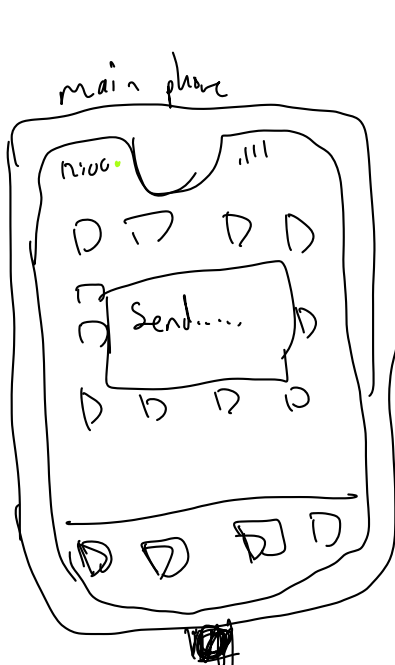

- If user on second phone click on no, a "connection failed" only on the main phone and the user on main phone can close the pop up. the user on second phone can choose to unplug the USB-C

# Selecting / Sharing

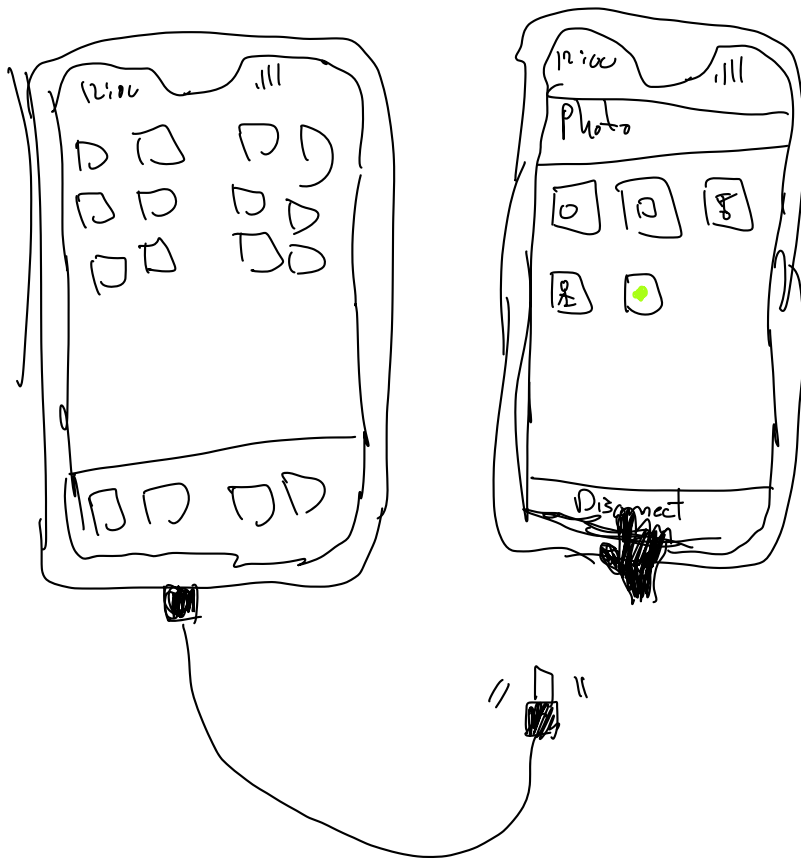

## photos

- User on Main phone can select photos by clicking on the photo. They want to send. then click on send.

- User on second phone can decide to Accept or Decline the photos that's been sent from the main phone. If they press decline the connection will be lost and can remove connection wire.

- After clicking on Accept, second phone user can click on disconnect to disconnect the connection from main phone after the photo's been sent.
